

PRESS RELEASE**T-Mobile Austria Launches Consumer Mobile Email Solution from O3SIS**

T-Mobile International Offers Customers Enhanced Mobile Experience by Combining Mobile Mail and Address Book Features

Sacramento, USA, January 30, 2007 — O3SIS Information Technology AG, a leading provider of personal mobile applications and Over-the-Air data synchronization (DS) technology for first tier mobile network operators and internet service providers, today announced that T-Mobile Austria, the Austrian network of the international T-Mobile Group, has launched the O3SIS Mobile Mail platform for its consumer customers.

O3SIS Mail allows consumers to read and respond to emails directly from their handset in real time. With the O3SIS Mail solution, T-Mobile can further enhance their high profile “Web’n’Walk” proposition with personal service options such as automatic email retrieval from an existing POP3/IMAP4 account or from Web-based providers like GMX and Chello, as well as advanced spam filtering and user-configured filters.

“We’re extremely proud to be working with T-Mobile” said Dirk Dörre, CEO and CTO at O3SIS. “They understand that mobile email is quickly becoming a highly appreciated service in the consumer space. By offering the O3SIS Address Book along with Mail service, T-Mobile can deliver an enriched mail offering that drives additional revenue streams, differentiates them in a competitive market, increases usability, and enhances their subscribers’ overall mobility experience.”

The O3SIS products are relying on widely accepted industry standards eliminating the need for proprietary hardware or client software. And with O3SIS’ support for integrating Over-the-Air provisioning, T-Mobile customers can instantly enable Mail services through a simple OTA-SMS (Over-the-Air Short Message Service).

About O3SIS Unified Mobile Applications (UMA) platform

O3SIS Mail and Address Book are key components of the company's [Unified Mobile Applications \(UMA\)](#) platform, which provides Over-the-Air data synchronization, a full-featured address book, mobile device [backup/restore](#), and [mobile personal information management \(PIM\)](#) functionality including consumer push e-mail. UMA enables operators to roll out multiple value-added services from a single, high-performance platform, significantly reducing system complexity and maintenance costs. O3SIS' UMA products support Over-the-Air synchronization on more than one hundred different devices from all leading handset vendors.

About O3SIS Information Technology AG

O3SIS unleashes the full potential of the mobile experience—bringing together content and communities and advancing communication through the O3SIS multi channel messaging platform for a more dynamic, productive, and connected mobile life. O3SIS enables mobile operators to build loyal subscriber communities and create additional revenue opportunities by accelerating the deployment of value-added services such as Mobile Backup & Restore, Mobile Media Publishing and Multi Channel Push Mail.

Since introducing its first mobile service in 1999, O3SIS has been a pioneer and market leader in the mobile industry, developing personal mobile data applications and standard-based over-the-air data synchronization technology that can be easily integrated into an operator's existing infrastructure.

O3SIS' innovative solutions are currently deployed by top tier mobile operators, including Vodafone Group, E-Plus, O2, and T-Mobile—with millions of users worldwide. Founded in 1996, O3SIS is headquartered in Germany with North American offices located in Northern California. For more information, visit www.o3sis.com or contact info@o3sis.com.

About T-Mobile Austria

T-Mobile Austria has established itself as a successful driving force on the Austrian mobile communications market. T-Mobile's takeover of tele.ring in April 2006 created a joint customer base of more than three million customers.

Customer service is at the heart of the company's ethos. In developing its projects and solutions, T-Mobile Austria emphasizes user-friendliness founded upon technological progress and development. The company's international outlook allows T-Mobile customers to benefit from a wide range of products and services, both at home and abroad, which can be used internationally as well as on the domestic network. T-Mobile Austria is a subsidiary of T-Mobile International, the mobile communications arm of Deutsche Telekom AG and one of the world's largest telecommunications companies.
