

Living Communication Suite (Enterprise Edition)

Next Generation Business Communication

Partner Benefits

- Attractive offering perfectly tailored to partners' enterprise target customers
- Unleash the enormous potential to cover Enterprises and Public Authorities need for secure mobility in their ICT strategies
- Benefit from a turn-key solution with a standard implementation service

Enriching Partner Support

- Customer Care & Customer Management Consoles
- Standard Maintenance, Project Management, Customer Care, Technical Trainings and Implementation support

Customer Benefits

- Personal communication data always synchronised with the company's servers and manageable anywhere via mobile phone.
- Freedom of choice: Hosted solution at ICT-Partner's site or turn-key integration at corporate site
- Carrier-Class architecture to cover all security demands of corporate IT departments with State-of-the-art coding and end-to-end encryption technologies
- Attractive 'all-in' device coverage (incl. e.g. Blackberry, iPhone, Symbian or Windows Mobile devices)

The Challenge

Mobility of information and communication is a key success factor in today's fast scaling business environments.

Enterprises demand to securely manage contacts, calendar, tasks and notes always synchronised with the company server – as well as having email communication on any mobile device.

The Solution: Out-of-the-box

Speaking of enterprise communication, most known solutions are limited either to certain smartphones or demand cost-intensive deployment of proprietary server solutions.

O3SIS provides an end-to-end information mobilising engine which partners can perfectly utilise to cover the needs of their enterprise customers including a straight forward standard deployment service.

The O3SIS Living Communication Suite leverages and integrates with already existing MS Exchange, or Lotus Notes/Domino environments, regardless of size of user base or any legacy system or database already deployed.

Utilising the comprehensive portfolio of supported native and O3SIS world leading client portfolio for e.g. Windows Mobile, Symbian phones as well as Blackberry or iPhone the product enables synchronisation plus mobile and push email capabilities for existing employees' mobile phones.

Enterprise Edition

- License Model hosted or integrated to corporate environment
- Industry Standard Connectors to:
 - MS Exchange,
 - Lotus Notes/Domino environments
- IP Push (only for O3SIS Clients) referring to OMA Standard
- End-to-end encrypted Over-the-Air Synchronization
- Client Provisioning
 - OTA (Over-The-Air) based configuration of native Clients
 - Clients via SMS (Download link)
- Direct Download from Web
- Account Management
- Single-Sign-On (SSO) Management
- Dedicated Storage capabilities for user account data and meta data regarding synchronisation
